

## RAYSAFE FLEXIBLE PVC FOR STRIP DOORS & CURTAINS

Rayflex “Hook On - Hook Off” Technology

**Flexible PVC is the only suitable material to use for strip curtains because of its strong thermal and acoustic insulation. Its flexibility and ease of movement allows effortless passage and the transparent strip gives you a clear vision through the opening.**

### **PVC STRIP DOORS / CURTAINS—SIMPLICITY AND ADAPTABILITY:**

#### **What are they?**

Hung on a rail, overlapping strips act like a wall to segregate two areas. Their flexibility and their movement on the hanging system allow them to be passed through with ease.

#### **Where are they used?**

Strip curtains can be used on any clear opening that requires strong insulation (temperature, noise, dust, draughts...), where ease of passage is of concern. They can be used over any opening including windows, pedestrian or vehicle doorways or as partition walls.

#### **Why are they used?**

Strip curtains are used to ensure:

- Fast and simple curtain assembly;
- Absolute ease of replacement of damaged or dirtied strips;
- Cost effective protection / segregation solutions;
- Durability;

#### **They guarantee:**

- Unimpeded passage;
- Strong insulation and energy savings;
- Environmental, birds, insects and draught barriers;
- Ease of maintenance and cleaning;
