- Suits opening heights up to 2130mm;
- Black mesh strips with clear PVC lower trim—200mm wide

FOR ANY QUESTIONS OR COMMENTS, PLEASE CONTACT OUR EXPERIENCED TEAM.

Our Insect Barrier Door kits are sold competitively worldwide and represents vast improvements in minimizing access, during the warmer months, of air-borne irritants such as birds, insects, other flying pests. It successfully reduces the health and safety hazards associated with air-borne cross contaminants, whilst allowing free passage of fresh air.

FASTER:

Our insect barrier system is design to greatly improve the way in which insect curtains are installed. Once the rail has been fixed, the pre-punched strips simply “snap-on”, ensuring installation and strip replacement, thereafter, is without issue.

DESIGN:

The specifically woven strips are designed to overlap in order to provide a wall against air-borne irritants. The system ensures that immediately after entry or exit through an opening the strips return to their original position. Each strip has a clear lower PVC trim to weight the system and to allow customisation to bespoke opening heights.

CLEANER:

Improved ease of replacement ensures the system can be maintained with greater ease. The strips simply “hook on—hook off” facilitating regular cleaning and replacement.

HEALTH & SAFETY:

Prevention of cross contaminants in the workplace means our product ensures highest levels of health and safety in your workplace. Obstructing animal and pest entry also greatly reduces incident rates. The passage of fresh air ensures your staff are at ease and comfortable in their working environment.

The Insect Barrier System suits openings 900—1800mm wide and heights up to 2130mm. Bespoke openings can be catered for upon request.
