SCREENFLEX CURTAINS

SCREENFLEX PVC SCREEN

MADE TO MEASURE ONE PIECE, RETRACTABLE SCREEN WITH SLIDING TRACK SUSPENSION SYSTEMS

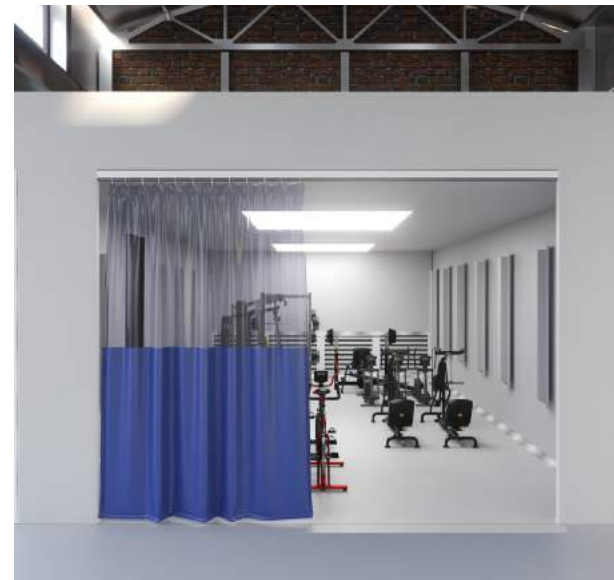

Screen-Flex is a range of heavy duty PVC screens used within the industry to create moveable barriers, permanent screens and ground and product covers. We utilised various weights and grades of PVC coated cloths and clear PVC films to create your ideal partition, cover or welding screen. Within the range you can mix colours (full-colour list below) with clear PVC to create screens with vision sections or use block colour for privacy. We can include eyelets for fixing along the top and sides, access points, weighted bottoms and Velcro seams to ensure you achieve the optimal solution for your application. The screens can be fully retractable and move from the top using either our robust Slide-20 sliding track system or our more lightweight and economical tension wire kit.

Our Screen-flex range are manufactured to order and we need to understand your exact requirements prior to offering a quotation.

- Opening Width
- Opening height
- Your chosen suspension system
- Colour Preference
- Do you require any access points, weighted hems or Velcro seams?

Typical Applications

- Warehouse
- Spray Booth
- Gymnasiums
